(54) INSERT BASE FOR CONCRETE FORM AND ITS
FIXING METHOD

(57) Abstract:

PURPOSE: To facilitate fixation into a form by integrally combining a short cylinder with a flange attached to one end of the short cylinder and flange fixing nails with a hard thermal plastic synthetic resin containing glass.

CONSTITUTION: A short cylinder 11 provided with a flange 12 at its one end is integrally combined with three nails 14 erected out of the surface of the flange 12 at the opposite side of the short cylinder 11 with a hard thermal plastic synthetic resin containing glass of 30 to 90 weight%. After this insert base has been fixed in a form C, an Insert bolt B is inserted into the short cylinder 11, concrete G is placed therein, and the nails 14 made of a synthetic resin are bent or cut off. By this constitution, fixation into the concrete form can thereby be simply performed.
